

Epiblast

The image displays a spatial distribution of data points represented as semi-transparent circles. The points are concentrated in two main regions. The left region is a dense, roughly triangular cluster colored in shades of light green and yellow, with the label 'Epiblast' positioned to its left. The right region is a more elongated, horizontal cluster colored in shades of yellow and orange, with the label 'NE' positioned to its right. A few isolated points are visible below the main clusters. The overall shape of the combined clusters is irregular, tapering towards the right.

NE
