

**Epiblast**

This figure is a scatter plot visualization, likely representing a t-SNE or similar dimensionality reduction of gene expression data. The data points are colored based on a gradient, ranging from dark purple/black on the left to bright yellow on the right. The leftmost, densest cluster is labeled 'Epiblast' in white text with a black outline. The rightmost, more elongated cluster is labeled 'NE' in black text with a white outline. A few isolated points are visible below the main cluster, including one dark blue point and one red point.

**NE**
