

**Early**

The diagram illustrates a biological structure, likely a developing embryo, represented by a dense collection of yellow dots. The structure is elongated and curved, with a distinct head-like region at the top left and a broader, more complex region at the bottom right. The dots are arranged in a way that suggests a gradient or progression from left to right, with the word 'Early' at the top left and 'Late Mesenchyme' at the bottom right.

**Late  
Mesenchyme**
