

Epiblast

The image displays a spatial distribution of data points represented by semi-transparent circles. The circles are colored according to a gradient: green on the left, transitioning through yellow to orange on the right. The density of the circles is highest in the center and right portions of the plot. Several larger, more opaque orange circles are scattered throughout, with a notable concentration in the right-hand side. The overall shape of the distribution is elongated from left to right, with a few isolated circles below the main body.
