

The image displays a spatial distribution of data points, likely representing a biological or geographical phenomenon. The points are colored in a gradient from dark purple to yellow, indicating a continuous variable. The distribution is elongated and roughly triangular, with a dense cluster of points on the left and a more dispersed area on the right. The label 'Epiblast' is positioned on the left side, and 'NE' is on the right side, suggesting a directional or spatial gradient. There are a few isolated points below the main cluster.
