

**Epiblast**

The diagram illustrates a plant shoot system. On the left is a large, rounded mass of pinkish-purple dots, labeled 'Epiblast'. This mass tapers into a narrow, dark purple/black region in the center. To the right of this central region is a large, elongated mass of green dots, representing the shoot tip. The label 'NE' is positioned at the rightmost end of this green region. A few individual dots, one purple and one black, are scattered below the main mass.

**NE**
