

Epiblast

The diagram illustrates a biological structure composed of two main cell clusters. On the left, a grey, irregularly shaped mass is labeled 'Epiblast'. To its right, a larger, elongated cluster of cells is shown in various shades of orange and brown. This cluster is labeled 'NE' at its rightmost tip. The orange cluster has a gradient, with lighter orange cells on the left side and darker brown cells on the right side. A few individual cells are scattered between the grey mass and the orange cluster, and one single grey cell is located below the orange cluster.
