

Epiblast

This figure is a spatial distribution plot, likely a t-SNE or similar dimensionality reduction visualization. It shows a large, elongated cluster of points. The points are colored based on a gradient: the leftmost, most dense part of the cluster is dark orange and labeled 'Epiblast'. As the points move to the right, the color transitions through lighter shades of orange to a pale yellow. The rightmost portion of the cluster is semi-transparent grey and labeled 'NE'. There are a few isolated points below the main cluster, also colored in shades of orange.

NE
