

Epiblast

The figure shows a spatial distribution of data points represented by semi-transparent circles. The points are arranged in a horizontal, elongated cloud. On the left side, the points are mostly grey. Moving towards the right, the points transition through shades of light blue, dark blue, and finally to green. The rightmost edge of the distribution is a solid dark green. The text 'Epiblast' is positioned to the left of the grey region, and 'NE' is positioned within the green region.
